PERSONAL PROFILE

Versatile Software Engineer with 4 years of professional experience spanning Full-Stack development, DevOps, and AI/deep learning integration in telecommunications, healthcare, and enterprise domains. Proven track record of delivering 8+ production systems, from microservices processing 1M+ subscriber registrations to AI-powered medical imaging platforms serving healthcare professionals. Currently pursuing a Master of IT at UTS Sydney. Seeking a junior to mid-level software engineering role.

CORE COMPETENCIES

Languages & Frameworks: Python (Django, FastAPI), JavaScript/ES6+ (Node.js, Express.js, React), PHP (Laravel), Java, HTML/CSS

AI & Machine Learning: Deep Learning, Image Segmentation, Face Recognition, TensorFlow/PyTorch

Databases: PostgreSQL, MySQL, SQL Server, MongoDB

DevOps & Cloud: Docker, Jenkins, GitHub Actions CI/CD, Nginx, Apache, Traefik, Prometheus, Grafana, AWS, DigitalOcean, Linux Administration

API & Architecture: RESTful APIs, WebSocket, Microservices, JWT/OAuth Authentication, Swagger/OpenAPI, SSL/TLS

Tools & Practices: Git, JIRA, Confluence, Postman, Agile/Scrum, Unit/Integration/Load Testing, Technical Documentation

PROFESSIONAL EXPERIENCE

Application Developer | Smart Axiata Co., Ltd.

Feb 2025 – May 2025

Phnom Penh, Cambodia

- Engineered a mission-critical SIM registration microservice in Laravel that supported the onboarding of 1M+ subscribers by integrating with multiple core systems and designing secure identity verification workflows aligned with national regulatory standards.
- Improved system throughput by 30% by conducting comprehensive unit, integration, load/stress, and UAT testing that identified and resolved 12+ performance bottlenecks before production launch.
- Accelerated third-party vendor integration by 40%, measured by reduced onboarding time, by standardising all API contracts and documentation with Swagger/OpenAPI across the SDLC.

Freelance Full-Stack Developer & DevOps Engineer | Alphatex Co., Ltd.

Feb 2023 – Dec 2024

Remote

- Delivered an end-to-end School Management System using Express.js, currently serving by 200+ active student records, by designing and developing 30+ RESTful API endpoints for enrolment, grading, scheduling, and attendance workflows.
- Cut deployment cycle time by 90% (from 4 hours to 25 minutes), measured by release frequency, by setting up SSL certificates, CI/CD pipelines via Jenkins and GitHub Actions, and automated deployment scripts across 3 environments.
- Achieved 99.9% server uptime, measured by monitoring dashboards (Prometheus/Grafana), by managing DevOps infrastructure and collaborating with security and infrastructure teams to patch vulnerabilities.
- Improved developer onboarding speed by 35%, measured by time-to-first-commit, by configuring Git repositories, webhooks, and automated build workflows with clear documentation.

Web Developer | VAMStack Co., Ltd.

Sep 2022 – Aug 2024

Bangkok, Thailand

- Delivered 4+ responsive web applications across mobile, tablet, and desktop, achieving Lighthouse accessibility scores of up to 98% by building performant front-end interfaces and server-rendered pages.
- Enabled real-time collaboration features for 100+ concurrent users, measured by WebSocket connection stability, by designing RESTful APIs and WebSocket endpoints for live data synchronisation.
- Eliminated critical authentication vulnerabilities, measured by zero security incidents post-deployment, by implementing JWT and OAuth-based authentication with custom middleware and input validation.

AI Engineer | VAMStack Co., Ltd.

July 2021 – Aug 2022

Chon Buri, Thailand

- Developed a proof-of-concept AI module for the Medical Imaging Platform (AI PACS), integrating it into the clinical diagnostic workflow by building image analysis pipelines that assisted healthcare professionals with real-time diagnostics.
- Improved segmentation accuracy by 15%, measured by Dice coefficient scores on validation datasets, by applying deep learning techniques (U-Net architecture) for image segmentation on medical imaging datasets including CT and MRI scans.
- Co-designed and built a Face Recognition pipeline, measured by 100 concurrent users/min at 95%+ accuracy, by implementing feature extraction, model optimisation, and scalable inference serving with GPU acceleration.

TECHNICAL PROJECTS

Medical Imaging AI Platform (AI PACS) | Python, TensorFlow, FastAPI, Docker

- Developed a cloud-based medical imaging platform integrating AI-driven analysis tools, adopted by 3+ clinical teams, by building real-time image segmentation, tagging, and classification services for diagnostic support.
- Role: Full-Stack Developer & AI Integrator.

School Management System | Node.js, Express.js, MongoDB

- Designed and developed a backend API for a private school, measured by streamlining operations across 4 departments, by automating student registration, course scheduling, classroom management, and inventory tracking workflows.
- Role: Backend Developer.

HR Promotion & Employee Management System | Django, Docker Compose, Traefik, Ubuntu

- Deployed a containerised HR platform on Linux infrastructure, measured by 500+ employee records managed, by implementing role-based access controls, promotion tracking, and automated SSL renewal via Traefik.

EDUCATION

Master of Information Technology (Enterprise Software Development)

Jul 2025 – Present

University of Technology Sydney (UTS), Sydney, Australia

- Specialising in enterprise software systems, cloud computing, and advanced software engineering practices. Expected completion: 2027.

Bachelor of Engineering (Embedded Systems Engineering)

Aug 2017 – Apr 2021

Burapha University, Chonburi, Thailand

- Graduated top of the Engineering cohort with a GPA of 3.80/4.0. Awarded Gold Medal Honour.
- Thesis: Health Image Segmentation using Deep Learning on Hardware Accelerators (FPGAs & GPUs).
- Relevant coursework: Data Structures & Algorithms, OOP, Computer Networks, OS, Embedded Systems Design, Database Systems.

GKS Exchange Program

Jul 2019 – Aug 2019

Chung Ang University, Seoul, South Korea

- Studied Vehicular Ad-hoc Networks using NS3 network simulator as part of a Government of Korea Scholarship program.

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- LFS101: Introduction to Linux — The Linux Foundation (Nov 2025)
- Build a CI/CD Pipeline — LinkedIn Learning (*Oct 2025*)
- Practical GitHub Actions — LinkedIn Learning (*Nov 2024*)
